RESEARCH PROJECTS

K. I. Mason, Principal Investigator

CSUDH, Norris Summer Grant

Total Award: \$3000

Project Period: 5/18/17 – present

Neurocognitive and Psychosocial Factors Associated with Sleep Behaviors in College Students

The purpose of the proposed study is to examine the extent to which sleep hygiene affects stress, mood, and executive functioning in college students. In addition, this study will assess the accuracy of self-report sleep data, when compared to novel sleep detection devices (e.g., Fitbit). Information from this study could help increase the understanding of sleep behaviors in efforts to target modifiable areas of sleep habits and improve cognitive and emotional functioning in college students.

K. I. Mason, Principal Investigator

CSUDH, Research, Scholarship, and Creative Activities Grant

Total Award: \$5000

Project Period: 4/12/16 – 12/31/2017

Understanding the Neurocognitive and Psychosocial Predictors of Academic Performance in an Ethnically Diverse Body of Freshman College Students

The pilot study examined the extent to which self-efficacy, social support, anxiety, stress and executive functioning contribute to academic performance and the retention of freshman college students.

NIH, National Institute of Allergy and Infectious Diseases

Total Award: \$426,000

Project Period: 09/26/09 - 08/31/2013

Ethnic Disparities in the Psychosocial and Neurocognitive Predictors of Health Outcome in HIV+ Adults

This study seeks to examine the extent to which neurocognitive and psychosocial variables predict the health outcome of HIV-infected adults, and to identify salient factors that moderate the relationship between chronic stress burden and health outcome. This investigation will also examine ethnic disparities in the resilience and health status of HIV seropositive African American and White adults, and to identify factors that may differentially predict positive health outcome in each group.

K. I. Mason, Principal Investigator

Unfunded research project
Project Period: 08/01/08 – 07/31/10

Knowledge and Attitudes about HIV and AIDS in a Multiethnic College Sample

This pilot study examines the knowledge and attitudes that college students have about HIV and AIDS. The relationship between beliefs, sexual behavior, and HIV testing will be examined in a multiethnic college sample.

K. I. Mason, Principal Investigator

Unfunded research project
Project Period: 11/02/07 – 05/31/2010

Factors Contributing to the Social Competence and Academic Achievement of Children Diagnosed with a Learning Disability and/or Attention-Deficit/Hyperactivity Disorder

This study seeks to identify factors that contribute to the academic achievement and social competence of children diagnosed with ADHD or a learning disability. This investigation will also examine the factors associated with depression, and assess how depression affects academic performance and social relationships.

3 T Two-Dimensional Cerebral MRS in HIV Youths

The goals of this study are to improve detection of abnormal cerebral metabolites in HIV - infected patients by using a two-dimensional technique (2D-MRS) with a 3 Tesla scanner and to correlate abnormal cerebral metabolites with performance on neurocognitive tests.

Ethnic Disparities in the Factors Contributing to Resilience in HIV-Infected Adults

This pilot study examined factors that can promote well-being in HIV-infected adults, as well as those that put individuals at risk for emotional disturbance. This pilot study also examined ethnic disparities with respect to HIV-related resiliency.
